Different from chemotherapy, RLT is only delivered to the cancer cells packing a much bigger punch in a highly concentrated dose. Evidence for the effectiveness of RLT shows a clear benefit for prostate and thyroid cancer, neuroendocrine and liver tumours, non-Hodgkin lymphoma, bone metastases and other diseases. Market Analysis. The global radiology information system market size was valued at over USD 528.4 million in year 2016. The growth in imaging procedures due to rising geriatric population base will contribute to the market growth in the coming years.
