

# Download Computer Recognition Systems

International Association for Computer Information Systems is a nonprofit association dedicated to the improvement of information systems and the education of information systems and computer professionals. These goals are accomplished through various activities, recognition awards, and publications. The facial recognition system is an innovative computer application which automatically identifies or verifies a person from his digital image or video frame taken from video footage. A facial recognition system is a technology capable of identifying or verifying a person from a digital image or a video frame from a video source. There are multiple methods in which facial recognition systems work, but in general, they work by comparing selected facial features from given image with faces within a database. Pattern recognition, In computer science, the imposition of identity on input data, such as speech, images, or a stream of text, by the recognition and delineation of patterns it contains and their relationships. - Computer Recognition Systems
