Geomorphology (from Ancient Greek: γῆ, gê, "earth"; μορφή, morphê, "form"; and λόγος, lógos, "study") is the scientific study of the origin and evolution of topographic and bathymetric features created by physical, chemical or biological processes operating at or near the Earth's surface. Human geography or anthropogeography is the branch of geography that deals with the study of people and their communities, cultures, economies, and interactions with the environment by studying their relations with and across space and place. Human geography attends to human patterns of social interaction, as well as spatial level ... The Middle Pleistocene glacial history of northern East Anglia is a controversial topic with differing opinions surrounding chronology, provenance and the relative stratigraphic framework. is and in to a was not you i of it the be he his but for are this that by on at they with which she or from had we will have an what been one if would who has her ... - An Introduction To Coastal Processes And Geomorphology Hodder Arnold Publication
