The study of personality includes multiple approaches to the question of who we are and how and why we are similar and different to other individuals. Personality psychology is a branch of psychology that studies personality and its variation among individuals. It is a scientific study which aims to show how people are individually different due to psychological forces. Its areas of focus include: Psychology is the science of behavior and mind (not to be confused with neuroscience, which studies the neural underpinnings of psychological phenomena ex. neural circuits). Psychology includes the study of conscious and unconscious phenomena, as well as feeling and thought. It is an academic discipline of immense scope. Psychologists seek an understanding of the emergent properties of brains ... - Behavior Genetics Principles Perspectives In Development Personality And Psychopathology Decade Of Behavior
