The straw man is preliminary, incomplete, and possibly incorrect - without the proper context, clients can anchor on the straw man and reference it, even after it has been discarded. It can also hurt your credibility if the client has a culture that values always being right. A straw-man proposal is a brainstormed simple draft proposal intended to generate discussion of its disadvantages and to provoke the generation of new and better proposals. The term is considered American business jargon, [1] but it is also encountered in engineering office culture. I have ignored, for example, diagrams that capture software requirements, or model systems of applications designed to support a given business process. At a high level, much of this information can be captured in a sufficiently detailed BPMN diagram, but there are many other diagrams, like dataflow diagrams, for example, that will be needed by software developers if not business analysts.
