The Apollo Root Cause Analysis™ methodology facilitates the creation of a common reality, using input from all stakeholders to produce an evidence-based understanding of the problem and ensures your solutions address proven causes to prevent recurrence. It makes problem-solving easy and gives those who have been trained, the skills to solve real-world problems faster, more efficiently and effectively at any time. In a nutshell, Apollo Root Cause Analysis is one of the very best books I've read on effective problem solving. The author clearly has a lot of experience, and does an excellent job balancing the practical with the theoretical. I find the method easy to understand and apply, and most importantly, it works. Others, such as fish bone or Ishikawa diagrams and Apollo Root Cause Analysis (ARCA) provide a structured tool to aid organization and evaluation of potential root causes. Both of these tools represent an overall methodology that includes properly defining the problem, identifying potential root causes, confirming true root causes, and implementing solutions that counter those root causes. ARMS Reliability is licensed to be a worldwide trainer in use of the Apollo Root Cause Analysis methodology and a reseller of the associated software, RealityCharting®. The Apollo Root Cause Analysis methodology, created by Dean Gano, is a simple, but powerful, 4 step problem solving method that; defines the problem, determines the causes, finds effective solutions and provides confidence that the problem will not recur. - Gano Apollo Root Cause Analysis
