

Download Goldline Chlorine Generator Manual

How do I choose which features and specs I want my salt system to have? There are some features that every saltwater chlorine generator absolutely has to have, and two specs that will give you the most system for your money. There are also a few features that many people choose to make a system more convenient and even easier to use. Recently bought an older home that had the goldline system on it but it was on it's last legs. This didn't cost much more than the parts needed and in ten minutes I changed out everything and tossed the old one in the garbage. Answered on 8/7/2015 by InyoPools Product Specialist Brian M.. I found this that explains the situation very well - "The cell is the part of the system that actually converts Salt (NaCl) to Chlorine. Water passes through the cell and over solid titanium plates that are coated with either ruthenium or iridium, which are naturally occurring metals. Asked on 7/13/2018 by Kenny. Hi, I have a bioguard MS-10 control panel w/ a hayward turbo cell T-CELL-15 which is over 10 yrs. old. My control panel is working properly but my cell is generating very little chlorine even with the control panel dial turned up to 80 even 100. - Goldline Chlorine Generator Manual
